Problem Set #4

R 7.5) Consider the following array: `int[] a = { 1, 2, 3, 4, 5, 4, 3, 2, 1, 0 };`

a.) `for (int i = 1; i < 10; i++) { a[i] = a[i - 1]; } →`

`int[] a is now: { 1, 1, 1, 1, 1, 1, 1, 1, 1, 1 }.`

b.) `for (int i = 9; i > 0; i--) { a[i] = a[i - 1]; } →`

`int[] a is now: { 1, 1, 2, 3, 4, 5, 4, 3, 2, 1 }.`

c.) `for (int i = 0; i < 9; i++) { a[i] = a[i + 1]; } →`

`int[] a is now: { 2, 3, 4, 5, 4, 3, 2, 1, 0, 0 }.`

d.) `for (int i = 8; i >= 0; i--) { a[i] = a[i + 1]; } →`

`int[] a is now: { 0, 0, 0, 0, 0, 0, 0, 0, 0, 0 }.`

e.) `for (int i = 1; i < 10; i++) { a[i] = a[i] + a[i - 1]; } →`

`int[] a is now: { 1, 3, 6, 10, 15, 19, 22, 24, 25, 25 }.`

f.) `for (int i = 1; i < 10; i = i + 2) { a[i] = 0; } →`

`int[] a is now: { 1, 0, 3, 0, 5, 0, 3, 0, 1, 0 }.`

g.) `for (int i = 0; i < 5; i++) { a[i + 5] = a[i]; } →`

`int[] a is now: { 1, 2, 3, 4, 5, 1, 2, 3, 4, 5 }.`

h.) `for (int i = 1; i < 5; i++) { a[i] = a[9 - i]; } →`

`int[] a is now: { 1, 1, 2, 3, 4, 4, 3, 2, 1, 0 }.`

Problem Set #4

R 7.11) Rewrite the following loops using the “enhanced for loop” construct.
Here, *values* is an array of floating-point numbers (type: *double*).

a.) `for (int i = 0; i < values.length; i++) { total += values[i]; }` →

```
for (double x : values)
{
    total += x;
}
```

b.) `for (int i = 1; i < values.length; i++) { total += values[i]; }` →

```
int position = 0;
for (double x : values)
{
    if (position >= 1)
    {
        total += x;
    }
    position++;
}
```

c.) `for (int i = 0; i < values.length; i++)`
`{`
 `if (values[i] == target) {return i;}`
`}`
→

```
int position = 0;
for (double x : values)
{
    if (x == target)
    {
        return position;
    }
    position++;
}
```
